

GymAnalysis - Installation Guide

1. Prerequisite Software Installation

The following tools are required to retrieve and execute the application.

1.1 Git Installation

Git is required for version control and repository cloning.

- **Windows:** Download and run the installer from git-scm.com.
- **macOS:** Execute `git --version` in the terminal and follow the prompts to install command line tools.
- **Linux (Ubuntu/Debian):** Execute `sudo apt update && sudo apt install git -y`.

1.2 Docker Desktop Installation

Docker is required to manage the containerized environment.

- **Windows/macOS:** Download the installer from docker.com.
- **Note:** Following installation, the Docker Desktop application must be launched and remain active.

2. Repository Retrieval

Navigate to your desired local directory using a terminal or command prompt and execute the following commands in terminal to clone the specific branch:

```
git clone -b Production --single-branch https://github.com/Ti  
mofejs-Rimensons/GymnasticsAnalysis.git  
cd GymnasticsAnalysis
```

3. Application Execution

To initialize the environment and start all services defined in the configuration, execute the following command:

```
docker compose up -d
```

```
tofa@Chocopie:/mnt/c/Users/Tofa/source/WorkProjects/GymnasticsAnalysis$ docker compose up -d
[+] Running 2/2
✓Container gymnasticsanalysis-backend-1 Running
✓Container gymnasticsanalysis-frontend-1 Running
```

4. Verification

Upon successful execution, the services are accessible via the following **local** address:

`http://localhost:8080`

To verify the status of the containers, you may use the Docker Desktop dashboard or execute `docker ps` in the terminal.

```
tofa@Chocopie:/mnt/c/Users/Tofa/source/WorkProjects/GymnasticsAnalysis$ docker ps
```

CONTAINER ID	IMAGE	COMMAND	CREATED	STATUS	PORTS
4714fb77ae49	ghcr.io/tofa-rimensions/gymnastics-frontend:latest	"docker-entrypoint.s..."	21 minutes ago	Up 21 minutes (unhealthy)	0.0.0.0:8080->80/tc
p gymnasticsanalysis-frontend-1					
2b988cc84956	ghcr.io/tofa-rimensions/gymnastics-backend:latest	"uvicorn main:app --..."	21 minutes ago	Up 21 minutes (healthy)	8080/tcp
gymnasticsanalysis-backend-1					

5. Termination

To stop all services and remove the associated containers, execute:

`docker compose down`

```
tofa@Chocopie:/mnt/c/Users/Tofa/source/WorkProjects/GymnasticsAnalysis$ docker compose down
[+] Running 3/3
✓Container gymnasticsanalysis-frontend-1 Removed
✓Container gymnasticsanalysis-backend-1 Removed
✓Network gymnasticsanalysis_default Removed
```
